Advantech Wireless Delivers 100 GaN BUCs to Asia

Advantech Wireless has completed the shipment of 100 GaN-based Solid State Power Amplifiers to a major Satcom operator based in Asia.

The Advantech Wireless Ku-band GaN based SSPA technology was the preferred choice for the customer due to high efficiency, low energy consumption, high reliability and high ambient operating temperature.

Combined with light weight, smallest size, these units fit perfectly into the mission critical, harsh environment, mobile Satcom environment.

We are proud to offer to our customers the most advanced and sophisticated technology available, designed to meet the most demanding requirements. While competitors' designs are still on the drawing board, Advantech Wireless is delivering real-world solutions today - and with the best warranty in the business!

David Gelerman scheduled to speak at Comsys VSAT 2012 Conference in London

David Gelerman, CEO of Advantech Wireless will be appearing at the upcoming Comsys VSAT 2012 Conference in London to speak about Small Steps Towards Risk Mitigation.

The structure of the VSAT industry is continually changing as new technologies, frequencies, applications and platforms are brought to market. Hardware cost, particularly the initial investment required by a new or expanding operator, has been falling over the past few years. Consequently, the questions are to what extent do costs have to be driven down further, do we already have the products in place to enable greater innovation on the part of service providers and what are the implications for the market.
